

Modular design improves visualization for graft site preparation and placement

Introducing the Modera Modular Pedicle Screw System from New Era Orthopaedics, LLC.

Designed for stabilization of the thoracolumbar spine, the Modera system features a selection of screw shanks -- 4.5mm to 8.5 mm diameter in multiple lengths -- with a modular Tulip Head that quickly and easily secures the assembly.

The low-profile design of the Modera system allows a simple surgical approach with improved visualization reducing potential complications.

Straight or pre-lordosed rods, cannulated or non-cannulated screws, and modular or pre-assembled polyaxial screw assemblies provide intra-operative versatility.

Product Features

4.5mm, 5.5mm, 6.5mm, 7.5mm and 8.5mm diameter color-coded screw shank options in multiple lengths

Modular tulip head and set screw reduces inventory requirements

Straight and pre-lordosed rods

Intuitive, comprehensive instrumentation
